

PU Foaming Equipment Overview

INDEX

COMPANY INTRODUCTION

HISTORY

PRODUCTS

MIXING HEAD (DTRC/DHV/DHVA/DHS)

METERING PUMP (DMP)

FOAMING MACHINE (MAMIX)

APPLICATIONS

REFERENCES

COMPANY INTRODUCTION

Offering a complete line of High Pressure Polyurethane Equipment

Produced by a leading South Korean manufacturer of high pressure mix heads, valves, metering pumps, foaming machines.

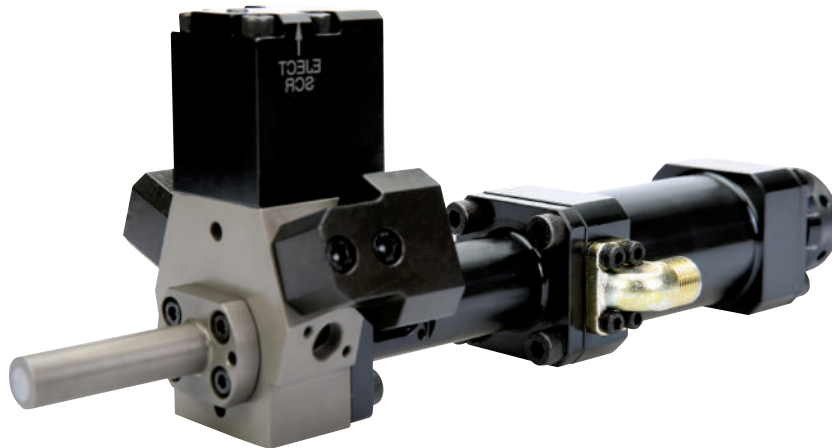

Trustable Technology

WORLD PATENTS

1. Mandrel of Invention
2. Ball Lock Retainer
3. Mixing Head for Polyurethane High Pressure Foaming System
4. Cleaning rod spiral groove in mixing head assembly
5. Mixing Head assembly for dual spray type
6. Mixing Head assembly with double tilted injection nozzle

MIXING HEAD (DTRC/DHV/DHVA/DHS) (High Pressure Mixing Head)

DTRC (Double Tilted Rear Chamber)

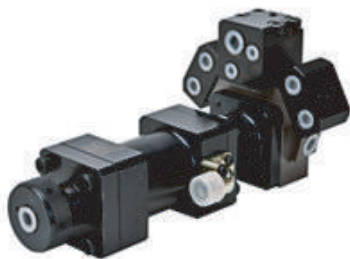

Mixing head is a core part of the foaming machine. It defines quality of an end product and affects efficiency of raw materials. The mix head allied "Double Tilted Injection" method which is an improved L-Type mix head.

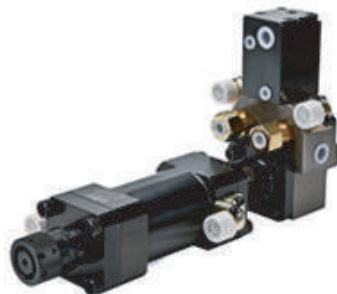

Double Tilted Nozzle and Reared Chamber Injection – DTRC Series

L-Type – DHVA Series

R-Type – DHS Series

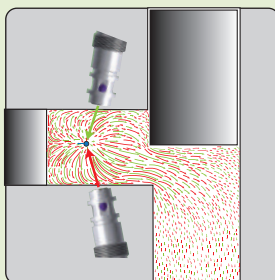

DHV 2K Series

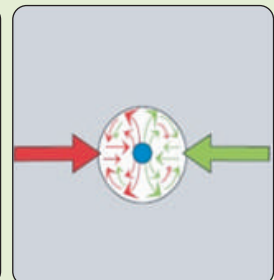

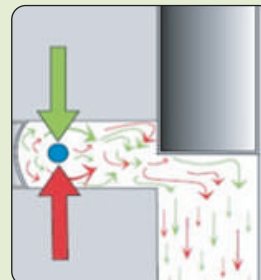

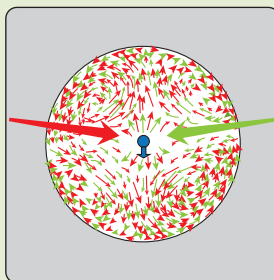

DHVA 2K Series

DHS 2K Series

Double Tilted Nozzle and Reared Chamber Injection(DTRC Series)

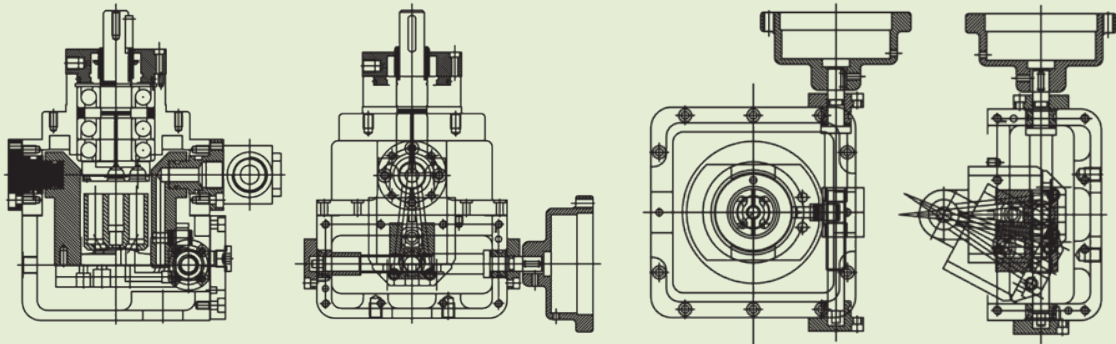

General L-Type Injection System

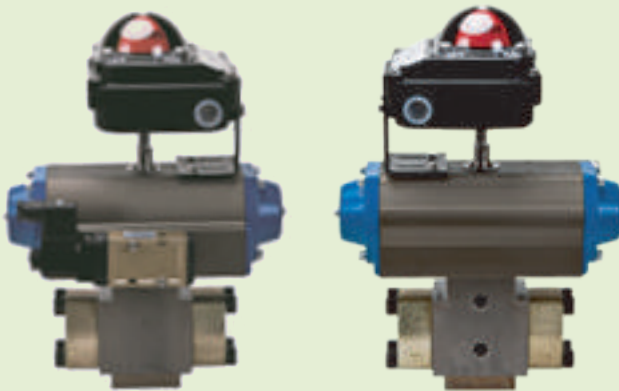

METERING PUMP (DMP) (Light weight duralumin metering pump)

New pump - 'DMP' is type of 'Axial Piston Variable Displacement' and it designed to improve the weaknesses from the previous metering pump with perfect compatibility from previous models and weight lightening has applied by using duralumin case.

SD VALVE (High-Pressure Switching Valve)

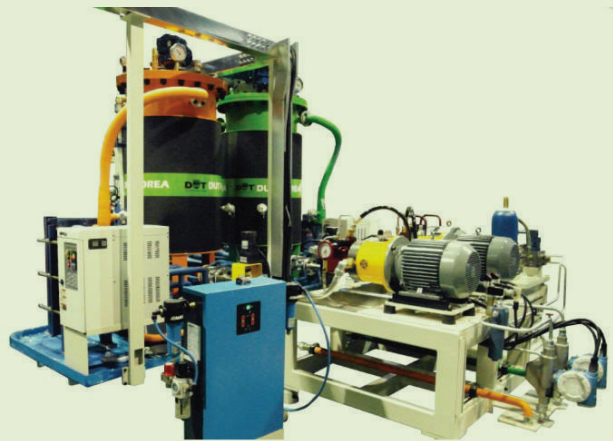

- To prevent flowing backward, it is controlled by actuator (Not by Hydraulic)
- Semipermanent product life by superprecision machine
- Fast high pressure building time by air actuator

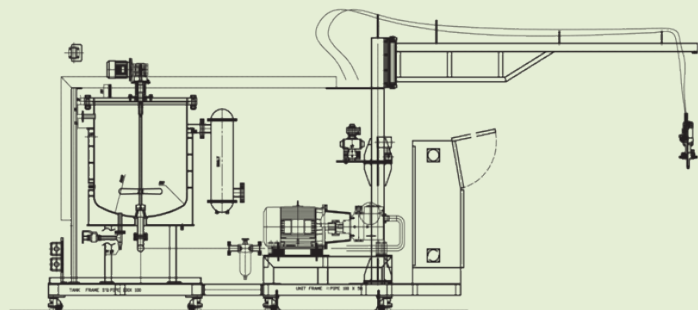

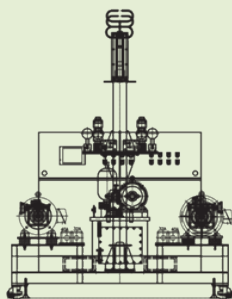

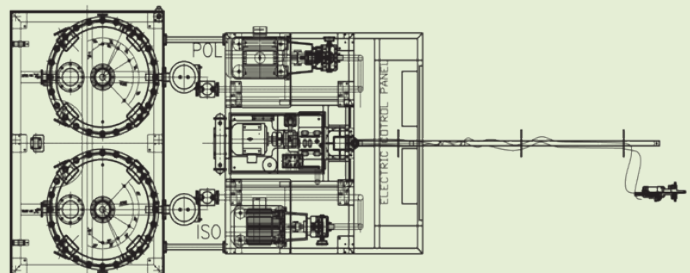

FOAMING MACHINE (MAMIX) (High Pressure Injection System)

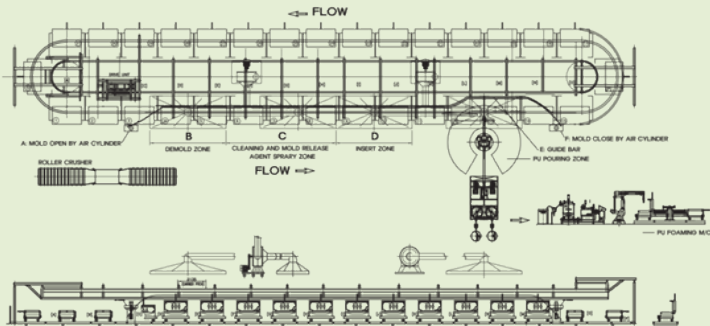

Core machine parts are produced in house, in Korea, including mix heads, pumps, and valves.
It guarantees stability and easy machine operation.

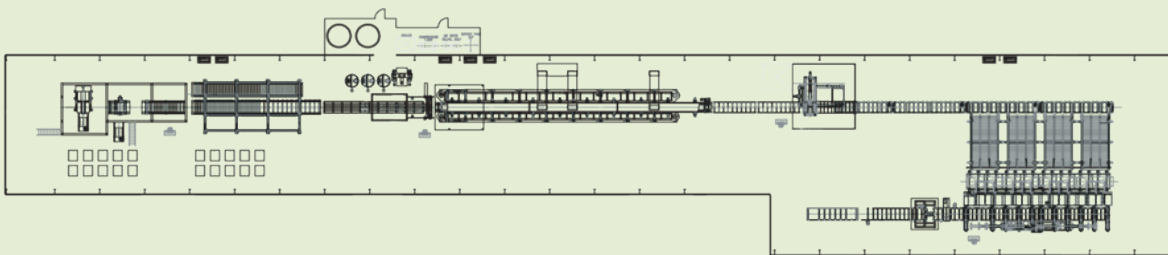

- High mixing efficiency
- Stable laminar flow
- Suitable for rigid and flexible foam
- Innovative nozzle control
- Long operating life
- Low maintenance cost

APPLICATIONS (Total PU solutions list)

LPR offers a wide machine range, from small parts to lines. All machines and lines are customized.
